

Technip

CERTIFICATE OF APPRECIATION

I wish to inform all concerned that the work carried out by Dominion Fabricators on behalf of Technip Geoproduction's Offshore Product Line and Technology (R&D Dept.) has been of excellent quality. They have a keen understanding of our needs for high quality, accurate devices needed to carry out scale model testing in support of our R&D efforts. Scale testing requires light, strong and accurate equipment and tolerances need to be respected to reduce errors leading to potentially flawed tests. Dominion Fabricators have taken advantage of every opportunity to meet our needs. In particular, they have delivered equipment on several model test projects (such as riser test frames and the TLP air table, which required installed accuracy within 1mm and a very smooth finish). We consider them to be a reliable and very accurate fabricator, with capabilities far beyond the average local company.

Our team of engineers and support staff, working together with local suppliers and Universities have made significant accomplishments in the last few years and have been able to make important contributions to world-class projects while delivering on the promise of local Malaysia content. Indeed, I would say we could not have achieved so much without the support from Dominion.

We look forward to carrying out future work together with Dominion Fabricators and we count on their continued focus on quality, safety and schedule in order to take it further on our projects.

Yours Sincerely,

TECHNIP GEOPRODUCTION (M) SDN BHD
